About Me

As a student majoring in Network Information System and Application (SIJA) at SMK Bina Putera Nusantara, I am an 11th grade student who is committed to developing myself in the world of technology. My current main focus is on Mobile and Backend Development, where I continue to improve my skills in these areas. In addition, my interest in stock investment drives me to understand more about fundamental analysis, while my knowledge of crypto and blockchain provides additional insights in the world of digital finance. During my educational journey since junior high school, I have also gained consistent knowledge in business, ensuring that I have a strong foundation in both technical and non-technical aspects to face future challenges.

Experience

Library Project

2022 - 2023

This project is called Vidiktif, starting from me thinking about making a literacy movement I then invited 3 of my friends to form a team to create a website-based library platform, the four of us as founders formed a larger volunteer team, in the end there were around 20 members collected, this project was supported by the principal and the foundation of our vocational high school. but unfortunately this project had to stop because of funding problems that came in succession.

All My Project

2023 - Now

I currently have various projects, such as a YouTube channel, creating an attendance app, freelance logos, etc.
